## TECHNICAL DOCUMENTATION

PRINCIPLES OF PNEUMATICS

PRESSURE:
The ratio between a force and the surface on which it acts.

$$
P=\frac{F(N)}{S\left(m^{2}\right)}=P a
$$

ATMOSPHERIC PRESSURE: Equivalent to the pressure exerted on a surface at sea level at $20^{\circ} \mathrm{C}$ and with $65 \%$ humidity: $10.33 \mathrm{~m} \mathrm{H}_{2} \mathrm{O} ; 760 \mathrm{~mm} \mathrm{Hg} ; 1.013 \times 10^{5} \mathrm{~Pa}$.

| ABSOLUTE PRESSURE: | The pressure above the absolute zero value - pressure $0=$ absolute vacuum. |
| :---: | :---: |
| GAUGE PRESSURE: | The pressure referring to ambient atmospheric pressure: it is normally indicated by the pressure gauges used in pneumatic circuits. |
|  | Pressure read on gauge (6 bar) |
|  |  |
|  | Absolute vacuum |
|  | Gauge pressure = (absolute P) - (atmospheric P.) |
| UPSTREAM PRESSURE: | Pressure of the compressed air at the pneumatic component inlet. |
| DOWNSTREAM PRESSURE: | Pressure of the compressed air at the pneumatic component outlet. |
| $\triangle$ P PRESSURE DROP: | Difference between upstream and downstream pressure. |
| FLOW RATE: | The volume of air passing through a given section in a unit of time. In pneumatics, the volume unit of measurement is Nl (Normal litre). In practice it represents the volumetric capacity of the air referring to ambient atmospheric pressure E.g. in a conduit of a given section, there is a mass flow of 1 litre of air ( $1 \mathrm{dm}^{3}$ ) at 7 bar absolute pressure. This value expressed as volume of air corresponds to 7 litres of air $\left(7 \mathrm{dm}^{3}\right)$ at the ambient atmospheric pressure ( 1 bar ). |

Volumetric flow rate (referring to absolute pressure)

- With the same pressure, the flow rate is directly proportional to the port cross section.
- With the same cross section, the pressure is directly proportional to the flow rate.
- Without a $\Delta P$ (difference between upstream and downstream pressure), there can be no flow rate.

PASCAL'S LAW:
A confined fluid transmits externally applied pressure uniformly in all directions.

Density of air, measured to $20^{\circ} \mathrm{C}$ to the atmospheric pressure: $1.275 \frac{\mathrm{~kg}}{\mathrm{~m}^{3}}$

## CALCULATING THE FLOW RATE OF A VALVE USING FLOW COEFFICIENT $\mathrm{k}_{\mathrm{v}}$

Coefficient $\mathrm{k}_{\mathrm{v}}$ gives approximate values when used for compressed air.
The flow rate $Q_{N}$ at a normal volume through a valve is:
Subsonic flow: $P_{2}>\frac{P_{1}}{2}$
Supersonic flow: $P_{2}<\frac{P_{1}}{2}$
$Q_{N}=28,6 \cdot k_{v} \cdot \sqrt{P_{2} \cdot \Delta P} \sqrt{\frac{293}{273+t}}$

$$
Q_{N}^{*}=14,3 \cdot k_{v} \cdot P_{1} \cdot \sqrt{\frac{293}{273+t}}
$$

where
$Q_{N}=$ flow rate at a normal volume $[\mathrm{N} / / \mathrm{min}]$
$Q_{N}{ }^{*}=$ critical flow rate at a normal volume $[\mathrm{Nl} / \mathrm{min}]$
$\mathrm{k}_{\mathrm{v}}=$ hydraulic coefficient in $\frac{\mathrm{l}}{\min }\left(\frac{\mathrm{kg}}{\mathrm{dm}^{3} \cdot \mathrm{bar}}\right)^{1 / 2}$
$P_{1}=$ absolute upstream pressure [bar]
$P_{2}=$ absolute downstream pressure [bar]
$\Delta P=$ difference in pressure $P_{1}-P_{2}[$ bar]
$\dagger$ = input air temperature [ ${ }^{\circ} \mathrm{C}$ ]

## CALCULATING THE FLOW RATE OF A VALVE USING FLOW COEFFICIENTS C AND B

The flow rate $Q_{N}$ at a normal volume through a valve is:

Subsonic flow: P2 >b $\cdot \mathrm{P}_{1}$
$Q_{N}=C \cdot P_{1} \cdot \sqrt{1-\left(\frac{r-b}{1-b}\right)^{2}} \cdot \sqrt{\frac{293}{273+t}}$

Supersonic flow: $\mathrm{P} 2<\mathrm{b} \cdot \mathrm{P}_{1}$

$$
Q_{N}^{*}=C \cdot P_{1} \cdot \sqrt{\frac{293}{273+t}}
$$

where
$Q_{N}=$ flow rate at a normal volume $[\mathrm{Nl} / \mathrm{min}]$
$Q_{N}{ }^{*}=$ critical flow rate at a normal volume $[\mathrm{Nl} / \mathrm{min}]$
$\mathrm{C}^{\mathrm{N}}=$ conductance in $[\mathrm{N} / / \mathrm{min} \cdot$ bar]
$P_{1}=$ absolute upstream pressure [bar]
$P_{2}=$ absolute downstream pressure [bar]
$r^{2}=$ upstream pressure : downstream pressure ratio $P_{2} / P_{1}$
b = critical pressure ratio $b=P_{2}^{*} / P_{1}$
$\dagger \quad=$ input air temperature $\left[{ }^{\circ} \mathrm{C}\right]$

## CALCULATING THE FLOW RATE OF A VALVE USING FLOW COEFFICIENTS $C_{v}$

The flow rate $Q_{N}$ at a normal volume through a valve is:

Subsonic flow: $P_{2}>0.528 \cdot P_{1}$

$$
Q_{N}=400 \cdot C_{V} \cdot \sqrt{P_{2} \Delta P} \cdot \sqrt{\frac{273}{273+t}}
$$

Supersonic flow: $\mathrm{P}_{2}<0.528 \cdot \mathrm{P}_{1}$

$$
Q_{N}^{*}=200 \cdot C_{V} \cdot P_{1} \cdot \sqrt{\frac{273}{273+t}}
$$

## where

$Q_{N}=$ flow rate at a normal volume $[\mathrm{Nl} / \mathrm{min}]$
$Q_{N}{ }^{*}=$ critical flow rate at a normal volume $[\mathrm{Nl} / \mathrm{min}]$
$C_{V}=$ coefficient of flow [US . GPM / p.s.i.]
$\mathrm{P}_{1}=$ absolute upstream pressure [bar]
$P_{2}=$ absolute downstream pressure [bar]
$t^{2}=$ input air temperature $\left[{ }^{\circ} \mathrm{C}\right]$

## CALCULATING THE NOMINAL FLOW RATE

The nominal flow rate $Q_{N m}$ of a valve, i.e. the flow at normal volume passing through a valve with ( $P_{1}=6[\mathrm{bar}]\left(P_{1}=7[\mathrm{bar}]\right.$ absolute) and $\Delta \mathrm{P}=1$ [bar], can be obtained from the previous formula as follows:
$Q_{\mathrm{Nn}}=66 \cdot k_{v}$
$Q_{\mathrm{N} \mathrm{n}}=943.8 \cdot \mathrm{C}_{\mathrm{V}}$
$Q_{N n}=7 \cdot C \cdot \sqrt{1-\left(\frac{0,857-b}{1-b}\right)^{2}}$
Equalising the first two formulae gives: $k_{v}=14.3 \cdot C_{v}$

- REACTIONS BETWEEN $Q_{N n}-C_{v}-k_{v}-K_{v}-S-d^{2}$

$Q_{N n}=$ flow rate in $[\mathrm{N} / / \mathrm{min}]$ with $\mathrm{p}_{1}=6[$ bar $]\left(\mathrm{P}_{1}=7[\right.$ bar $]$ absolute) and $\Delta \mathrm{P}=1$ [bar]
$\mathrm{k}_{\mathrm{v}} \quad$ hydraulic coefficient in $\frac{\mathrm{l}}{\min }\left(\frac{\mathrm{kg}}{\mathrm{dm}^{3} \cdot \mathrm{bar}}\right)^{1 / 2}$
$\mathrm{K}_{\mathrm{v}} \quad$ hydraulic coefficient in $\frac{\mathrm{m}^{3}}{\mathrm{~h}}\left(\frac{\mathrm{~kg}}{\mathrm{dm}^{3} \cdot \mathrm{bar}}\right)^{1 / 2}$
$C_{v} \quad$ coefficient of flow [US • GPM / p.s.i.]
$\mathrm{S}_{\mathrm{e}} \quad$ equivalent cross section [ $\mathrm{mm}^{2}$ ]
$d_{e}^{2}=S \cdot \frac{4}{\pi}$ through diameter ${ }^{2}$ in $\left[\mathrm{mm}^{2}\right]$ obtained from the equivalent cross section

## CONVERSION TABLES

## TABLE 8 - RECOMMENDED FLOW RATE

Maximum recommended flow rate in $\mathrm{Nl} /$ min for pneumatic circuit piping. Flow rate values are calculated as follows:

- pipes $\varnothing 2$ to $\varnothing 12$ with a pressure drop equal to $0.3 \%$ of operating pressure per metre of pipe.
- pipes $\varnothing 15$ to $\varnothing 40$ with a pressure drop equal to $0.15 \%$ of the operating pressure per metre of pipe.

| Inside diameter in mm - Nominal diameter in gas inches |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## TABLE 9 - INDICATIVE AIR CONSUMPTION FOR DIFFERENT TYPES OF EQUIPMENT

| Type of equipment | Consumption at full load NI/min. | Type of equipment | Consumption at full load NI/min. |
| :--- | :--- | :--- | :--- |
| $6 \mathrm{~mm} \varnothing$ drill | 300 | Bench tamper | 350 |
| $12 \mathrm{~mm} \varnothing$ drill | 500 | 8 kg tamper | 700 |
| $20 \mathrm{~mm} \varnothing$ drill | 1150 | $10 \mathrm{~mm} \varnothing$ riveting machine | 450 |
| $45 \mathrm{~mm} \varnothing$ drill | 1650 | $20 \mathrm{~mm} \varnothing$ riveting machine | 1000 |
| $M 6$ screwdriver or bolt screwer | 300 | 4 kg chisel | 380 |
| M10 screwdriver or bolt screwer | 400 | 6 kg chisel | 500 |
| M16 impulse screwer | 1150 | Small paint-spray gun | 160 |
| M25 impulse screwer | 1650 | Industrial paint-spray gun | 500 |
| $1^{\prime \prime} \varnothing$ wheel grinder | 350 | $1 \mathrm{~mm} \varnothing$ cleaning bellows | 65 |
| $6^{\prime \prime} \varnothing$ disk grinder | 1500 | $2 \mathrm{~mm} \varnothing$ cleaning bellows | 250 |
| $9^{\prime \prime} \varnothing$ disk grinder | 2100 | $5 \mathrm{~mm} \varnothing$ nozzle sandblasting machine | 1600 |
| Polishing machine | 1200 | $8 \mathrm{~mm} \varnothing$ nozzle sandblasting machine | 4200 |
| 1000 kg hoist | 2150 | Plaster sprayer | 500 |
| Spot welder | 300 | Heavy-duty concrete vibrator | 2500 |
|  |  | 35 kg concrete breaker | 1650 |
|  |  | 38 kg breaker | 1850 |
|  |  |  | 28 kg breaker |

## DEGREE OF PROTECTION

## NORMA EN 60529 E CEI 529

EGREE
OF PROTECTION
AGAINST
THE PENETRATION
OF LIQUIDS

DEGREE OF PROTECTION AGAINST
THE PENETRATION OF FOREIGN BODIES COMING INTO CONTACT WITH LIVE PARTS.

| $\mathbf{l}^{\text {nd }}$ No. | DESCRIPTION | $2^{\text {nd }}$ No. | DESCRIPTION |
| :--- | :--- | :--- | :--- |
| 0 | Not protected | 0 | Not protected |
| 1 | Protected against solid bodies <br> greater than $\varnothing 50 \mathrm{~mm}$ <br> Protected against solid bodies | 1 | Protected against water falling <br> vertically (condensate) |
| 3 | greater than $\varnothing 12 \mathrm{~mm}$ <br> Protected against solid bodies <br> greater than $\varnothing 2.5 \mathrm{~mm}$ | 3 | Protected against drops of water <br> falling up to $15^{\circ}$ off the vertical <br> Protected against rain water up <br> to $60^{\circ}$ off the vertical |
| 4 | Protected against solid bodies <br> greater than $\varnothing ~$ <br> Protected against dust | 4 | Protected against sprays of water <br> from any direction. |
| 6 | Totally protected against dust | 6 | Protected against jets of water fired <br> from any direction <br> Protected against sea waves <br> or the like <br> Protected against the effects <br> of immersion |

## CHECK COMPATIBILITY

Pneumatic products include elastomer gaskets that are made of acryl-nitrile butadiene (NBR), polyurethane or fluorocarbon rubber (FKM/FPM).
It is important for them not to come into contact with incompatible substances, which could cause them to swell or crack and subsequently malfunction.

In particular, it is necessary to check compatibility of:

- the oil used in the air compressor
- any oil used in the lubricator
- the oil or culting fluids used on the machine, which could get into the cylinders and from there the valves.

We have drawn up a compatibility table containing a list of chemicals and elastomers, and also Hostaform ${ }^{\circledR}$, the technopolymer most commonly used in our products. Please refer to the English webpage www.metalwork.it/eng/materiali_compatibilita.html or the Italian webpage www.metalwork.it/ita/materiali_compatibilita.html.

The website http://divapps.parker.com/divapps/seal/mobile/ FluidCompatibility/Desktop/ of Parker Pradifa,
one of our gasket suppliers, contains an interactive table defining incompatibility.

Below are some the oils that are definitely compatible with all the elastomers used with our products:

- UNI and ISO FD 22 lubricants (Energol HPL, Spinesso, Mobil DTE, Tellus Oil).
- low pressure compressor oil: SHELL CORENA OIL D 46
- high pressure compressor oil: SHELL RIMULA X OIL 40.

Please note that some ester-based synthetic oils used in compressors are extremely incompatible with NBR and polyurethane. ROTOROIL 8000 F2 is one of them.

Metal Work can provide you with further information or carry out research and tests if required.

## AIR PURITY CLASS

The ISO 8573-1 standard establishes the level of air quality in terms of solid particles, humidity and oil concentration.

Example:

TABLE 1 - SOLID PARTICLE CLASSES

| Class | $0.1<d \leq 0.5$ | number of par rticle size, d [ $0.5<d \leq 1.0$ | $1.0<d \leq 5.0$ |
| :---: | :---: | :---: | :---: |
| 0 | As specified by the equipment user or supplier and more stringent than class 1 |  |  |
| 1 | $\leq 20000$ | $\leq 400$ | $\leq 10$ |
| 2 | $\leq 400000$ | $\leq 6000$ | $\leq 100$ |
| 3 | Not specified | $\leq 90000$ | $\leq 1000$ |
| 4 | Not specified | Not specified | $\leq 10000$ |
| 5 | Not specified | Not specified | $\leq 100000$ |
| Class | Concentration, $\mathrm{C}_{\mathrm{P}}\left[\mathrm{mg} / \mathrm{m}^{3}\right]$ |  |  |
| 6 | $0<\mathrm{C}_{\mathrm{p}} \leq 5$ |  |  |
| 7 | $5<C_{P} \leq 10$ |  |  |
| X | $C_{p}>10$ |  |  |

## TABLE 2 - HUMIDITY CLASSES

| Class | Pressure dewpoint $\left[{ }^{\circ} \mathrm{C}\right]$ |
| :---: | :---: |
| 0 | As specified by the equipment user or supplier and more stringent than class 1 |
| 1 | $\leq-70$ |
| 2 | $\leq-40$ |
| 3 | $\leq-20$ |
| 4 | $\leq+3$ |
| 5 | $\leq+7$ |
| 6 | $\leq+10$ |
| Class | Concentration of liquid water, $\mathrm{C}_{\mathrm{w}}\left[\mathrm{g} / \mathrm{m}^{3}\right]$ |
| 7 | $\mathrm{C}_{\mathrm{w}} \leq 0.5$ |
| 8 | $0.5<\mathrm{C}_{w} \leq 5$ |
| 9 | $5<\mathrm{C}_{w} \leq 10$ |
| $\mathbf{X}$ | $\mathrm{C}_{w}>10$ |
|  |  |

## TABLE 3 - OIL CLASSES

| Class | Oil concentration (aerosol, liquid, vapour) $\left[\mathrm{mg} / \mathrm{m}^{3}\right]$ |
| :---: | :---: |
| 0 | As specified by the equipment user or supplier and more stringent than class 1 |
| 1 | $\leq 0.01$ |
| 2 | $\leq 0.1$ |
| 3 | $\leq 1$ |
| 4 | $\leq 5$ |
| X | $>5$ |
|  |  |
